

Task: Configuring IP address to router in PT.

Proc:

- 1) connect 2 switches to a router and a few PCs to each switch
- 2) Config PC's IP & gateway IP addresses.
- 3) ~~Ping~~ <sup>from</sup> Connect the router & the rest using FastEthernet connection
- 4) Ping any PC from any other. If it works then the connect is established otherwise check connections.

Ping response is the time taken for the ping to return.

Destination unreachable is shown when the host & sender aren't connected

Request timed out is shown when the receiver takes too much time to respond

Reply is an acknowledgement sent to the host when their ping is received.
