TASK: Configuring RIP routing protocol in routers

PROCESS:

1) Take 3 routers & connect 2 of them to one & connect one PC to each leaf router.

2) give ip & gateway address to all the devices.

3) Now, router → config → routing → rip
   for first router (left to right)
     add   10.0.0.0 & 20.0.0.0
   for second router
     add   20.0.0.0 & 30.0.00
   for third router
     add 30.0.00 & 40.0.0.0

4) Now check if they've routed connected by using the command in CLI " show ip route".

5) if all the routers are connected then its successful.
